

User	Name	No.	Name	No.	
	Nandini		the system will always use a 2 auth login system that is overridable via face ID for administrator accounts	2	This would let volunteers log in easily while providing assistance/while updating urgency of requests so everything can be up to date each
	Malinda Guo		the user shall create an account that must have at least 3 letters	1	This allows security for each account, making sure there are no robots
	Danny Cruz		the system shall allow users to provide their current location when requesting assistance	1	This is to help relief teams find where the user is located at
	Danny Cruz		The system shall allow user to create a maximum of 5 requests	1	This helps prevent spam and fraudulent requests
	Malinda Guo		The system shall allow users to view current status of their request	1	This lets users know about the progress of their relief request
	Malinda Guo		the user shall create an account that must have at least 7 numbers	1	This allows security for each account, making sure there are no robots
	Malinda Guo		the user shall create an account that must contain 1 special character	1	This allows security for each account, making sure there are no robots
	Malinda Guo		the user shall select a preferred language for viewing system content	3	Allows users who speak another language to understand the system
	Romeo Cullen		the user shall have the ability to call a request before its claimed	3	This is important to change/prior the request so that the right support is provided
	Romeo Cullen		The user shall have the ability to delete a request before its claimed	3	This is important so that incase a request isn't needed anymore
	Nandini		The user shall be able to see where their family members are during a active disaster	1	Allows for users to find out if their family is safe and if they may need to create a request for them
	Nandini		The user shall be able to make one shelter for their family to come to and send them a map to it	1	Allows for users to know where their family is and how to reunite with them
	Nandini		The site will have a readback feature (initiated by voice command) for anyone who is blind	1	Allows for blind/hearingly blind people to use the app
	Nandini		Blind victims can request volunteers to escort them to shelters if for blindness is bad	1	Allows for blind victims to use the app
	Nandini		The app will have a Readback feature that any user can fill out after the event has passed	1	Allows for further suggestions for the app
	Nandini		The app will have built in and adjustable color blindness filters	2	Allows for anyone to see the app properly incase they cannot see the text of a certain color
	Alex P		The system shall enable direct textual chat or voice communication between a user and the assigned volunteer after a request is claimed	2	Allows the user to get in contact with an operator even if they don't have service
Admin	Nandini		Admins shall have the ability to log status of shelters in real time	1	This ensures that shelters can accommodate for everyone coming in.
	Danny Cruz		Admins should be able to view current relief requests, shelter information, and volunteer activity	1	This helps admins keep a track of current requests, shelter resources, and volunteer activity
	Malinda Guo		The admin shall mark when they are personally volunteer to rescue a victim	1	this ensures that each victim is helped
	Nandini		Admins shall have the ability to remove the status of anyone in their shelter	2	This would help to keep track of the needs of the shelter
	Romeo Cullen		The admin shall be able to deactivate a volunteer account	3	Useful for situations where a volunteer can't be, or have poor quality of volunteering
	Romeo Cullen		The admin shall be able to temporarily disable someone's ability to make requests	2	This is a helpful tool for when a user is making unnecessary requests
Volunteers	Nandini		The admin shall have the authority to designate/other volunteers admin permissions exclusively for handling people in their shelter	2	This prevents admins from being overwhelmed during emergency situations in the bigger shelters
	Romeo Cullen		The user shall view a list of vets	2	This allows for the user to find veterinary services and shelters for their animals. This is convenient because it accounts for 2 family members that typically get overlooked and animals proper care for them in an emergency
	Danny Cruz		The system should display the exact number of active and inactive volunteers	2	This provides an exact number of active and inactive volunteers since these coordinators need to know how many are currently available to assist with relief operations
	Romeo Cullen		The volunteer shall be able to view the distance to a claimed request location	3	This is needed so that the volunteer knows how far and how much time they have.
	Malinda Guo		the system shall let the volunteer see each volunteer has on hand	1	can provide aid if a victim cannot make it to a shelter in an emergency situation
	Malinda Guo		the system shall list the services each volunteer provides	1	prevents a useless tip from a volunteer that cannot help the victim
Shelters	Nandini		Volunteers should be equipped to help evacuate people out of flooded shelters	2	allows for people to evacuate easily
	Nandini		Volunteers should have full access to find aid supplies while assisting people	2	Allows for victims to receive on site first aid
	Alex P		The system shall allow authorized volunteers to view an interactive map of pending requests and claim/denign requests to themselves	2	allows for volunteers to help without being dispatched
	Romeo Cullen		The Volunteer shall have to complete a background check	3	This is used to make sure that we have the right people to volunteer
	Nandini		The map will have implemented GPS services to find selected shelters while walking	2	This helps shelters maintain enough supplies and keep backup resources available in case a supply truck is delayed or unable to reach the shelter
	Malinda Guo		the system shall should provide if shelters are completely vacant	2	allows victims a secure place to stay
Resources	Malinda Guo		the system shall should provide if shelters are completely occupied	2	allows victims to find the next secure place to stay
	Nandini/Alita		The system will provide for shelters specifically designed for people with specific disabilities if available	2	Allows victims to make sure that they will always have their disability accommodated for (example: wheelchair accessibility)
	Danny Cruz		The system shall keep a track of available spaces at each shelter	1	This helps prevent overcrowding in shelters making resources more available for each person
	Alex P		The app shall list the user how many people are at each shelter	1	
	Nandini/Alita		The shelter will have special tags if there is anything wrong with the shelter	1	This ensures that no one accidentally goes to a shelter that cannot accommodate their needs
	Romeo Cullen		The shelter shall provide information whether pack up allowed	3	This gives users information about where they can bring their pets and where they can't
Relief Request	Malinda Guo		The app shall show live inventory of items in stock at shelter	1	show what's available at shelters so victims won't show up to an empty shelter or will be able to find what they need
	Danny Cruz		The system shall alert volunteers when a resource is running low	1	This helps volunteers to restock or order more supplies to prevent from running out
	Danny Cruz		The system shall keep track of available supplies such as food and water and other necessary essentials	2	This helps shelters maintain enough supplies and keep backup resources available in case a supply truck is delayed or unable to reach the shelter
	Malinda Guo		the app shall show what services each shelter provides	2	show what's available at shelters so victims won't need to make additional trips because one doesn't have what they need
	Nandini		The app will give volunteers training resources	2	allows volunteers to be well equipped in emergency situations
	Nandini		The app will show medical information if any given shelter at the user's request	2	allows victims to go to the right shelter if any accommodations are needed
Geographical Region	Romeo Cullen		The app will show religious services at any given shelter at the user's request	2	Allows victims to choose a shelter that accommodates them
	Romeo Cullen		the app will show protocols at any given shelter at the user's request	2	Allows victims to choose a shelter that accommodates them
	Romeo Cullen		The user shall view a checklist of recommended pet supplies based on their pet type	1	Allows for more accurate results for pets
	Romeo Cullen		The app shall be able to request a volunteer thru an email or individual	2	This is a helpful tool that can be used for the more elderly community
	Nandini		The app will make sure the shelter can provide always emergency	1	Makes sure victims do not experience side effects from having a shelter
	Nandini		The app will ping police/emergency services if there is a resource shortage	1	makes sure shelters are properly stocked and well equipped during the hurricane
	Nandini		Anyone with religious or dietary needs should receive accommodation after anyone with critical needs	3	This would ensure that the most critical needs receive priority to ensure safety for everyone
	Malinda Guo		the system shall have user provide names of victim or victims	2	allows volunteers to know who they're helping
	Malinda Guo		the system shall have user provide their location	2	allows volunteers to know where they need to go
	Malinda Guo		the system shall have user provide what aid they need	2	allows volunteers to know what they need to bring
	Danny Cruz		The system shall keep a record of previous relief requests	3	It allows authorized people to review assistance that has already been provided
	Malinda Guo		the system shall provide an option for special requests or instructions	1	for aid for those who have specific needs that aren't commonly found
	Nandini		The system will automatically get emergency services involved if the volunteers cannot do anything about the situation	2	Volunteers cannot assist with every situation, for example, someone stuck under debris
	Nandini		The system should provide first aid instructions to anyone present at the scene	2	If the volunteers can't get there in time, due to severe injuries, others could provide help to prevent further damage
	Romeo Cullen		The user shall specify any special needs for a pet/mobility or mobility	1	This gives the volunteers a better insight on what is requested
	Nandini		The user shall be able to ping volunteers if the situation becomes urgent	2	Gives users more accessibility to volunteers
	Alex P		The app shall allow users to download map regions offering containing emergency locations	1	Power and cell towers often go out or are damaged during hurricanes. Users need to be able to access these resources
	Romeo Cullen		the user shall have a view of the location of the hurricane	1	when the hurricane is on its way
	Danny Cruz		The app shall allow the user to give access permission to their location	1	It's necessary for the user's data to be informed of hurricane preparation
	malinda Guo		the app shall provide the location of the nearest volunteer	1	This helps support the user's exact location so relief teams can quickly find where assistance is needed
	Danny Cruz		The system shall clearly state that there have been affected by the hurricane	1	allowing quick accessibility for traveling between volunteer and victim
	Danny Cruz		The app shall provide information about which routes are available to reach shelters	2	This helps avoid routes and areas which areas require more resources and assistance
	Nandini		The map will provide routing features if certain disabilities cannot make it to their local shelter due to a disability	2	This helps users and older people to avoid areas that are blocked or damaged due to the hurricane
	Nandini		The GPS system should provide wheelchair accessible routes or ping volunteers to provide assistance	2	This helps users who have mobility issues (such as broken legs) from having to traverse places that they physically cannot
	Nandini/Alita		The GPS system should provide accessibility via satellite connection in the location of EMS services if there are out and someone is injured	1	This helps people who may not be able to reach a shelter in time when grievously wounded or injured
	Nandini		EMS services will be provided with the location of every single life threatening injury or situation	2	Allows EMS services to quickly deploy to the site without being pinged directly
