No.	Name	No.	Name	No.
User				
	Nandasai	the system will always use a 2 auth login system that is overrideable via face ID for admin/volunteer accounts.		This would let volunteers log in easily while providing assistance/while updating urgency of requests so everything can be up 2 to date easily
	Melinda Guo	the user shall create an account that must have at leats 3 letters	1	This allows security for each account, making sure there are no robots
	Danny Cruz	The system shall allow users to provide their current location when requesting assistance	1	This is to help relief teams find where the user is located at
	Danny Cruz	The system shall allow user to create a maximum of 5 requests	1	This helps prevent spam and fraudulent request
	Danny Cruz	The system shall allow users to view current status of their request	1	This lets users know about the progress of their relief request
	Melinda Guo	the user shall create an account that must have at least 3 numbers	1	This allows security for each account, making sure there are no robots
	Melinda Guo	the user shall create an account that must contain 1 special character	1	This allows security for each account, making sure there are no robots
	Ronnie Gutierrez	the user shall select a preferred language for viewing system content	3	Allows users who speak another language to understand the system
	Ronnie Gutierrez	the user shall have the ability to edit a request before its claimed	3	This is important to changes/edit the request so that the right support is provided
	Ronnie Gutierrez	The user shall have the ability to delete a request before its claimed	3	This is important so that incase a request isnt needed anymore
	Nandasai	The user shall be able to see where their family members are during a active disaster	1	Allows for users to find out if their family is safe and if they may need to create a request for them
	Nandasai	The user shall be able to mark one shelter for their family to come to and send them a map to it	1	Allows for users to know where their family is and how to reunite with them
	Nandasai	The site will have a readback feature (initiated by voice command) for anyone who is blind	1	Allows for blind/partially blind people to use the app
	Nandasai	Blind victims can request volunteers to escort them to shelters if their blindness is bad	1	Allows for blind victims to use the app
	Nandasai	the app will have a feedback feature that any user can fill out after the event has passed	2	Allows for further suggestions for the app
	Nandasai	The app will have built in and adjustable color blindness filters	2	Allows for anyone to see the app properly incase they cannot see the text of a certain color
	Alex P	The system shall enable direct masked chat or voice communication between a user and the assigned volunteer after a request is claimed.	2	Allows the user to get in contact with an operator even if they don't have service
Admin				
	Nandasai	Admins should have the ability to tag status of shelters in real time.	1	This ensures that shelters can accomadate for everyone coming in.
	Danny Cruz	Allows admins to view current relief requests, shelter information, and volunteer activity	1	This helps admins keep a track of current requests, shelter resources, and volunteer activity
	Melinda Guo	The admin shall mark when they are personaling volunteer to rescue a victim	1	this ensures that each victim is helped
	Nandasai	Admins should have the ability to review the status of everyone in their shelter	2	This would help to keep track of the needs for the shelter
	Ronnie Gutierrez	The admin shall be able to deactivate a volunteer account	3	Useful for situations where a volunteer can lie, or have poor quality of volunteering
	Ronnie Gutierrez	The admin shall be able to deactivate a users account	2	This is a helpful tool for when a user is making unnecessary requests.
	Nandasai	The admins shall be able to temporarily disable someone's ability to make requests	2	This prevents the same person from spamming requests if they do it too much that it drags other requests down
	Nandasai	The admins shall have the authority to designate/give other volunteers admin permissions exclusively for handling people in their shelter	2	Prevents admins from being overworked during emergency situations in the bigger shelters
Volunteers				
	Ronnie Gutierrez	The user shall view a list of vets.		This allows for the user to find veterinary services and shelters for their animals. This is convenient because it accounts for 2 family members that typically get overlooked and ensures proper care for them in an emergency.
	Danny Cruz	The system should display the exact number of active and inactive volunteers		This provides an exact number of active and inactive volunteers since relief coordinators need to know how many are 2 currently available to assit with relief operations
	Ronnie Gutierrez	The volunteer shall be able to view the distance to a claimed requests location		3 This is needed so that the volunteer knows how far and how much time they have.
	Melinda Guo	the system shall list the materials each volunteer has on hand	1	can provide aid if victim cannot make it to a shelter in a emergency situation
	Melinda Guo	the system shall list the services each volunteer provides	1	prevents a useless trip from a volunteer that cannot help the victim
	Nandasai	Volunteers should be equipped to help evacuate people out of flooded shelters	2	allows for people to evacuate easily
	Nandasai	Volunteers should have full access to first aid supplies while assisting people	2	Allows for victims to receive on site first aid
	Alex Perez	The system shall allow authenticated volunteers to view an interactive map of pending requests and claim/assign requests to themselves	2	allows for volunteers to help without being dispatched
	Ronnie Gutierrez	The Volunteer shall have to complete a background check	3	This is used to make sure that we have the right people to volunteer
Shelters				
	Nandasai	The map will have implemented GPS services to find selected shelters while walking.		This helps shelters maintain enough supplies and keep backup resources available in case a supply truck is delayed or 2 unable to reach the shelter
	Melinda Guo	the system shall should provide if shelters are completely vacant	2	allows victims a secure place to stay
	Melinda Guo	the system shall should provide if shelters are completely occupied	2	allows victims to find the next secure place to stay
	Nandasai Allada	The system will provide shelters specifically designed for people with specific disabilities if available	2	Allows victims to make sure that they will always have their disability accomidated for (examples: wheelchair acessibility
	Danny Cruz	The system shall keep a track of available space at each shelter	1	This helps prevent overcapacity in shelters making resources more available for each person
	Alex P	The app shall tell the user how many people are at each shelter	1	
	Nandasai Allada	The shelter will have special tags if there is anything wrong with the shelter	1	This ensures that no one accidentally goes to a shelter that cannot accomidate their needs
	Ronnie Gutierrez	The shelter shall provide information whether pets are allowed	3	This gives users information about where they can bring their pets and where they can't.
Resources				
	Melinda Guo	The app shall show live inventory of items in stock at shelter		1 show whats available at shelters so victims won't show up to an empty shelter or will be able to find what they need
	Danny Cruz	The system shall alert volunteers when a resource is running low		1 This helps volunteers to restock or order more supplies to prevent from running out
	Danny Cruz	The system shall keep track of available supplies such as food and water and other necessary essentials		This helps shelters maintain enough supplies and keep backup resources available in case a supply truck is delayed or 2 unable to reach the shelter
	Melinda Guo	the app shall show what services each shelters provide		show whats available at shelters so victims won't need to make additional trips because one doesn't have what they need
	Nandasai	The app will give volunteers training resources	2	allows volunteers to be well equipped in emergency scenarios
	Nandasai	The app will show medical informationat any given shelter at the user's request	2	Allows victims to go to the right shelter if any accomidations are needed
	Ronnie Gutierrez	The app will show religious services at any given shelter at the user's request	2	Allow victims to choose a shelter that accomadates them
	Ronnie Gutierrez	the app will show protocols at any given shelter at the user's request	2	Allow victims to choose a shelter that accomadates them
	Ronnie Gutierrez	The user shall view a checklist of recommended pet supplies based on their pet type	1	Allows for more accurate results for pets
	Ronnie Gutierrez	The user shall be able to request a wellness check on another individual	2	This is a helpful tool that can be used for the more elderly community
	Nandasai	The app will make sure the shelter can provide allergy medicine	1	Makes sure victims do not experience side effects from having a allergy
	Nandasai	The app will ping police/emergency services if there is a resource shortage	1	makes sure shelters are properly stocked and well equipped during the hurricane
Relief Request				
	Nandasai	Anyone with religious or dietary needs should recive accomidation after anyone with critical needs.		3 This would ensure that the most critical needs recive priority to ensure safety for everyone.
	Melinda Guo	the system shall have user provide names of victim or victims	2	allows volunteers to know who they're helping
	Melinda Guo	the system shall have user provide their location	2	allows volunteers to know where they need to go
	Melinda Guo	the system shall have user provide what aid they need	2	allows volunteers to know what they need to bring
	Danny Cruz	The system shall keep a record of previous relief requests	3	It allows authorized people to review assistance that has already been provided
	Melinda Guo	the system shall provide an option for special requests or instructions	1	for aid for those who have specific needs that arent commonly found
	Nandasai	The system will automatically get emergency services involved if the volunteers cannot do anything about the situation	2	Volunteers cannot assist with every situation, for example, someone stuck under debris
	Nandasai	The system should provide first aid instructions to anyone present at the scene	2	If the volunteers cant get there in time, due to severe injuries, others could provide help to prevent further damage
	Ronnie Gutierrez	The user shall specify any special needs for a pet(medication or mobility)	1	This gives the volunteers a better insight on what is requested
	Nandasai	The user shall be able to ping volunteers if the situation becomes urgent	2	Gives users more accessibility to volunteers
Geographical Region				
	Alex P	The app shall allow users to download map regions offline containing emergency locations		Power and cell towers often go out or are damaged during hurricanes. Users need to be able to access these resources 1 when the network is unavailable. 9
	Ronnie Gutierrez	the user shall have a view of the locaion of the hurricane		1 this is neccesary for the users to be informed of hurricane preperation
	Danny Cruz	The app shall allow the user to give access permission to their location		1 This helps pinpoint the user's exact location so relief teams can quickly find where assistance is needed.
	melinda Guo	the app shall provide the location of the nearest volunteer		1 allowing quick accessibility for traveling between volunteer and victim
	Danny Cruz	The system shall identify areas that have been affected by the hurricane		2 This helps relief teams determine which areas require more resources and assistance
	Danny Cruz	The app shall provide information about which routes are available to reach shelters		2 This helps users and relief teams to avoid areas that are blocked or damaged due to the hurricane
	Nandasai	The map will provide rerouting features if certain disabilities cannot make it to their local shelter due to a disability		2 This helps users who have mobility issues (such as broken legs) from having to traverse places that they physically cannot
	Nandasai	The GPS system should provide wheelchair acessible routes or ping volunteers to provide assistance		2 This helps users who have mobility issues (such as broken legs) from having to traverse places that they physically cannot
	Nandasai Allada	The GPS system should provide offline accesibility via satellite connection + the location of EMS services if they are out and someone is injured		1 This helps people who may not be able to reach a shelter in time when gravely wounded or injured
	Nandasai	EMS services will be provided with the location of every singular life threatening injury or situation		2 Allows EMS services to quickly deploy to the site without being pinged directly
